HOW TO READ IT

Baseline = 2025-26 regular season (82 games; a player's baseline covers every game he played, with any team). Recent = 2026-27 (4 games). For each rate, shrink the recent proportion toward the baseline with a Beta prior of strength m (empirical-Bayes flavour): p1_shrunk = (k1 + m*p0)/(n1 + m), with m = 60 for shot-diet / zone / assisted shares, m = 250 for FG%-type rates (rim FG%, 3P%; 3P% needs ~750 attempts to stabilize, so a 10-game 3P% is almost never flaggable by design), m = 60 for turnover rate. FLAG when |p1_shrunk - p0| >= 0.06 AND |z| >= 2.0 where z = (k1/n1 - p0)/sqrt(p0*(1-p0)/n1) (raw recent proportion against the baseline proportion, SE from p0) AND n1 >= 15 recent trials. Here the windows are disjoint.

Grades are words on one scale: elite ≥ 90th percentile, excellent 75–89, good 60–74, above average 50–59, average 40–49, below average 25–39, bad < 25. Shooting and ball-security percentiles are computed from the play-by-play among qualified players (3P% 100+ 3PA, rim FG% 100+ restricted-area attempts, FT% 75+ FTA, rates per FGA 300+ FGA, ball security 300+ usage events). Starters are the players who started the team's last game. Statuses are the official injury report's, as listed, with the report's date and the time it was read, never a reason; a carded player listed at either of the two most serious statuses keeps his card but leaves the free-throw and foul boxes. Every sentence above is produced from these numbers by fixed templates.

Computed by NightlyHoops from play-by-play and box scores of regular-season games, and the league's official injury report (statuses only). Data collected 2026-10-30; report built 2026-10-30 22:16 UTC.
